- Analog and digital models
- Weatherproof housing(option)

WIRELESS PACIFIC™

Everything you need to...

- Increase customer satisfaction.
- Boost productivity and improve responsiveness.
- Provide emergency assistance

Call Assist™ allows your customers to simply push a button when they need help or professional assistance. Your two-way radio equipped personnel will be immediately alerted with a clear, pre-recorded voice message sent over the company radio channel so that your staff can provide prompt personalised customer service or emergency support.

Call Assist is a battery powered wall mountable call box that communicates wirelessly to your organisation's portable radios. It can work with any existing analog or digital two way radios. In remote locations it can also be solar powered, if required.

Should you desire, custom labelling and messages are available. Options allow you to pre-record your own messages! Naturally, you can operate as many boxes as your store, business or organisation needs.

Each call box also allows connection of an external sensor to send a different pre-recorded message. This might be used for example; to let you know someone has just walked into the store or perhaps, entered an out of bounds staff only area.

The Call Assist unit comes complete with an AC power pack for recharging. Naturally voice announcements over your radio system will advise when charging is needed or when AC power is connected, so you can basically set it up and forget until it tells you it needs your assistance.

For those situations requiring its use outdoors or in remote locations a ruggedised external weatherproof housing option is available

WHY RADIO?

Two-way radio is specifically designed for groups or work teams who need to communicate quickly. With a simple press of a "PTT" (push to talk) button, two-way radio allows instant clear communications between two, twenty, fifty or even more people – it's that simple.

Regardless of the size of an operation, business professionals know effective two-way radio communications can dramatically improve workplace safety and productivity, better helping you meet your clients and customers needs more efficiently than any other type of wireless communications.

Wireless Pacific's new highly versatile Call Assist™ wireless call box can help your organisation achieve higher levels of productivity, provide a safe and secure environment and help deliver true customer satisfaction in your workplace at a price that makes sense!
